

Fire of 8/26/86

Received Page for Structure Fire on Sierra Slope @ 4:55 PM. Responded to Fire Station. Enroute to fire station, received 2nd page for structure fire on Angel fire. Responded as officer on 2nd truck out of station (482). Arrived at fire & checked with officer in charge about laying a line to the hydrant. Was told this line was not needed & to off load our water supply into 484. A few minutes later a search was being organized for two young boys. Our Chief (Don Ford) came around to the front of the house & told us he thought they had found the two boys in the structure. After this, I never went back to the structure. I did take over as engineer on 484. At approx. 7:30, I returned to the scene for the overhaul but never entered the back yard. I stayed out in the street with the equipment van & returned it to the station.
